+			Two of the assignee's production systems were modeled using reliability engineering	
			techniques to predict start up of the systems. The modeling relied upon only competing cause fallure analysis.	
-	A R THE RICH STREET WE SHE'S W		A specific piece of equipment, known as a splicer used to join two webs together was modeled. The splicer was considered to have a failure at the end of each roll of material to be joined. Therefore, the model was considered to be a cumulative failure for the limited run time of the splicer upon reaching the end of the roll. Thus, the modeling was done using cumulative and competing cause failure analysis. This modeling was used in a decision to buy a new-splicer. That splicer was, in turn, used to make product which was shipped to the trade.
